

1. I got the same result on both channels. I believe the reason they are the same is because both channels are using the same rulesets and the rulesets don't have any rules that change results based on channels used

2. I get the following error

```
{  
  "error": "ECI not found: KgtxnG8zvtmDgqLH1w9roa"  
}
```

Because I am trying to use a channel that does not exist.

3. I get the following response

```
{  
  "directives": []  
}
```

Because there are no matching rules but it is a valid request on a valid channel

Ruleset url: [https://raw.githubusercontent.com/kjdevocht/CS462/master/Lab1/hello\\_world.krl](https://raw.githubusercontent.com/kjdevocht/CS462/master/Lab1/hello_world.krl)
